

The Reality of Information Governance Deployment at the National Institutes of Health

ABSTRACT-----

Successful implementation of Information Governance promises the much sought after integrative collaboration of business and IT to achieve enterprise goals and lead to better decision-making. Nevertheless, its design is technically complex, organizationally challenging, and, above all, politically sensitive.

NIH is a Federal agency that spans 27 separate institutes and centers involved in highly complex medical research. Within this, information serves as the bloodline linking everything together. NIH is a highly federated and semantically segmented environment where data quality and consistency are of paramount value, and needs of multiple stakeholders must be balanced and met. This presentation draws upon the experience of institutionalizing federated information governance at NIH, facilitated by the Enterprise Architect.

- What are the complex dynamics and political realities involved?
- What was proposed?
- What is the creative "structure" implemented as an outcome of the study?

BIOGRAPHY-----

Helen McCulloch Schmitz

Acting Chief Information Technology (IT) Architect
National Institutes of Health (NIH).

Ms. Schmitz has been with the NIH Enterprise Architecture program for seven years, three as Acting Enterprise Architect. She has over twenty years IT experience, providing leadership in support of large, complex enterprises in the private sector and the Federal Government, including the Department of Defense and civilian agencies. She worked with the American City Business Journals then the Resolution Trust Corporation. While working with EDS for seven years, she supported the Army, the Pentagon and NASD.

She earned a Bachelor of Arts degree in zoology from Connecticut College, then worked as a lab technician in microbiology at Wayne State Medical School, in Detroit, Michigan. Her results have been achieved through the collaborative development of NIH Enterprise Architecture and sponsorship of technology transformation initiatives with demonstrated value to NIH. She sees her role as a liaison between NIH's scientific and business organizations and those that provide IT support.

The Reality of Information Governance Deployment at the National Institutes of Health

About NIH

Page 3

NIH: The Nation's Medical Research Agency

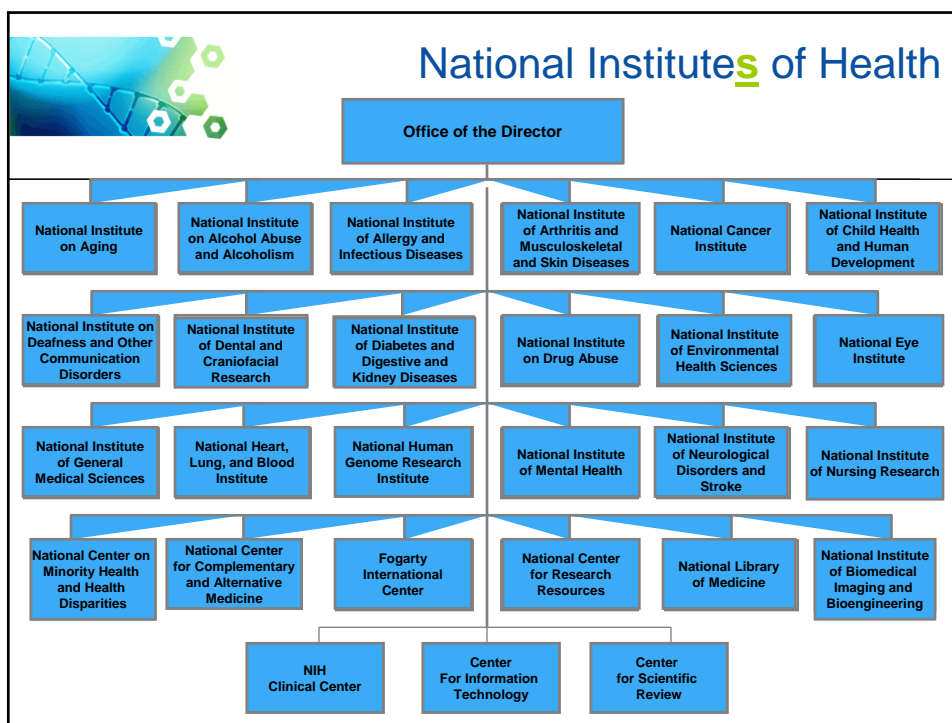

“Science in pursuit of fundamental knowledge about the nature and behavior of living systems and the application of that knowledge to extend healthy life and reduce the burdens of illness and disability.”

Contact: enterprisearchitecture@mail.nih.gov

Page 4

Dual Nature of NIH...

NIH INTRAMURAL RESEARCH

NIH is an institution

Supports:

- Over 10,000 scientists and research personnel
- 15.8% of NIH budget- \$4.7 B
- Primary location: Bethesda, MD
- A few labs throughout U.S.

NIH EXTRAMURAL RESEARCH

FY 2005 NIH Extramural Grants by Research Institution

Supports:

- Over 3,000 institutions worldwide
- Over 325,000 scientists & research personnel
- Awards issued to over 100 countries
- Clinical, Basic, & Translational Research
- 84% of the NIH budget - \$24.8 B

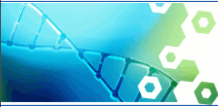

Complexity

- 3 functional areas
 - Intramural
 - Extramural
 - Administrative supporting services
- 27 institutes and centers
- All have own unique needs and requirements – and need to work together

Information Governance Frameworks

Page 11

Generic Governance Framework Proposed

Identify Issue

- What are the business effects?
- What are the risks?
- What is the cost?

Issue Capture

Reactive

- Discovered opportunities and errors

Proactive

- Project Data Models
- EA Data Standards

Issue Documentation

Issue Packaging

- Functional Assessment
- Technical Assessment

Resolution Recommendations

- Impact and implications
- Tradeoffs
- Resolution Recommendations

Resolve Issue

Preparation

- What is the scope?
- What are the applicable standards?
- What are the affected standards?
- What is the infrastructural fit?

Coordination

- Impact
- Recommendations
- Results

Local Authorities

- Ad Hoc Working Group
- Ad Hoc Working Group

Domain Authorities

- Action request
- Information

Enterprise Authority

- Cross-domain action recommendation
- Disagreement resolution request
- Information

Data Governance Sponsor

- Disagreement resolution request

Implement Resolutions

• How do we implement the change?

Coordination

- Policy
- Procedure
- Technology

IT

- Decision impact
- Decision impact

Functional Components

- Decision impact

- How do we implement the change?
- How do we adapt the infrastructure?
- How do we capture the change in formal models and business rules?

- What is the scope?
- Raise?
- Keep?
- Lower?
- Waive?

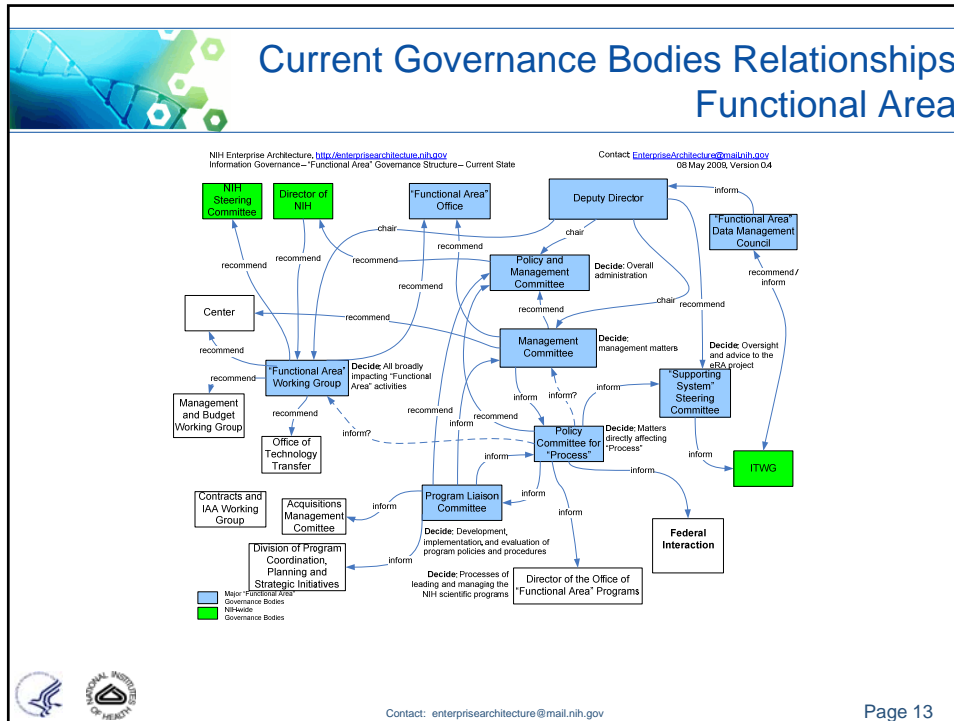

- What will it take to resolve?
- Policy?
- Procedure?
- Technology?

- How will it be resolved?

Page 12

Proposed NIH Information Governance Clearinghouse Concept

- **Clearinghouse Concept:** A collection point within NIH to which information-related issues and their resolutions are submitted then published and disseminated. Stakeholders throughout NIH can evaluate issues and identify potential impacts beyond the original scope and intent, then provide feedback. Feedback is then collated and either re-published or forwarded through the appropriate governance.
- **Benefits of a clearinghouse:**
 - **Transparency:** Proactively connect and inform stakeholders, minimizing reliance on personal relationships.
 - **Based on successful standard development process:** documented process to publish for input of interested parties.
 - **Collaboration:** Reduce the time-to-resolution by reusing solutions, leveraging experiences, or even combining resources to close unresolved issues.
 - **Non-Invasive:** Issue publication simply informs others; evaluation and resolution follow existing processes.
 - **Issue Support:** Independent support to maintain the clearinghouse, and that support can also assist with issue identification, evaluation, impact analysis, and resolution.

Lessons Learned

- Governance is complex and difficult in a federated organization.
- Strong leadership and sponsorship is critical for success.
- Keep structures and processes simple.
- There is contradictory direction because this is a new process, and people's expectations are defined by their unique perspective.
- Communication is critical to get buy-in.
- People respond better if they see an artifact they can alter, rather than start an artifact from scratch.

Page 22

Decision Factors - Sample

Criteria	1	2	3	4	Project Value	Weight	Weighted Score
1. Impact to Regulatory, Policy, or other Requirement?	Hinders	No Impact	Supports, but isn't required	Satisfies		4	0
2. Criticality of Deadline	None, N/A	Low	Medium	High		3	0
3. Alignment with Strategic Goals	None, N/A	Low	Medium	High		3	0
4. New or Enhanced Business or Research Capability	None/Removes	Incremental or Enhancement	Reengineers existing process	Totally New		2	0
5. Productivity or Quality Improvement	Decrease	None	< 10%	> 10%		3	0
6. End-user satisfaction	Decrease	No Change	Improvement	Significant Improvement		1	0
7. Benefit to External NIH Customers/Constituents	None, N/A	Low	Medium	High		4	0
8. Business or Customer Support	None/Resistance	Single Group	Multiple Business Areas, Multiple ICs	NIH-wide, mult-OPDIV		3	0
9. Risk of failure due to business reasons (political, scope, lack of requirements, lack of clear performance measures)?	Significant	High	Medium	Low		3	0
10. Risk of failure due to technical reasons (complexity, new technology, insufficient technical expertise)?	Significant	High	Medium	Low		3	0
11. Risk Reduction to NIH	None/Increases	Low	Medium	High		2	0

Page 23

Charter – Template

- **Function**
 - [A statement describing the top objectives and the highest level decisions that the entity is responsible for.]
- **Authority**
 - [A statement describing the authority that formed and formally institutionalized the entity.]
- **Responsibilities**
 - Recommend the overall responsibilities of the entity with respect to information governance.
- **Relationships**
 - Recommend the relationships to other governance entities.
- **Composition**
 - Recommend membership, roles, and skills of the constituency of the entity.

Information Governance Project Output

- **Quorum**
 - [A list of statements describing the minimum set of conditions required to reach a formal decision including participation and/or circumstances (if it is an emergency the president can decide, if it is ...)]
- **Operation**
 - [A list of the frequency, dates, or events that trigger meetings.]
- **Disposition**
 - [A statement describing the set of conditions that leading to the different disposition alternatives for the entity.]
 - [This is success/failure/stagnate and if we succeed/ then we will evolve/disband/etc]
