

Textual Integration -- Some Business Examples

ABSTRACT

For years organizations have been making decisions based on transaction processing data. There is nothing wrong with this. But there is another form of data that needs to be included in the corporate decision making process, and that type of data is unstructured textual data.

This presentation addresses some of the issues of decision making with textual data and ends with an in depth, real example, where the attendee can see how text can be reduced to a data base that can be queried and analyzed.

BIOGRAPHY

William H. Inmon

Inmon Consulting Services

Bill Inmon, is recognized as the "father of the data warehouse" and co-creator of the "Corporate Information Factory." He has 35 years of experience in database technology management and data warehouse design. He is known globally for his seminars on developing data warehouses and has been a keynote speaker for every major computing association and many industry conferences, seminars, and tradeshow.

As an author, Bill has written about a variety of topics on the building, usage, and maintenance of the data warehouse and the Corporate Information Factory. He has written more than 650 articles, many of them have been published in major computer journals such as Datamation, ComputerWorld, and Byte Magazine. Bill is currently a columnist with Data Management Review, and has been since its inception. He has published 45 books; one sold over half a million copies, 21 have been book club selections with publishers such as Prentice-Hall, John Wiley, and QED.

Translations of various books have been done in Chinese, Dutch, French, German, Japanese, Korean, Portuguese, Russian, and Spanish.

TEXTUAL INTEGRATION – SOME
BUSINESS EXAMPLES

in no small part, corporate decision making
has depended on data and data bases for years

we take that for granted

© Copyright Inmon Consulting Services, 2008

and for years the data that has populated the data bases of the world has been based on business transactions –

- banking activity
- retail sales
- insurance claims
- telephone calls
- airlines reservations, etc

© Copyright Inmon Consulting Services, 2008

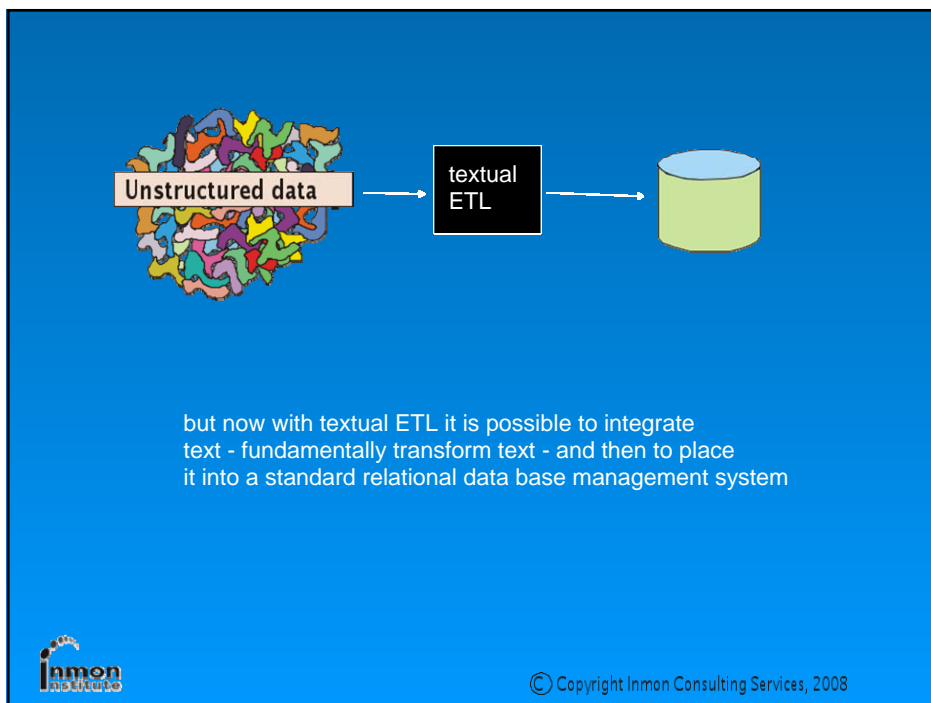

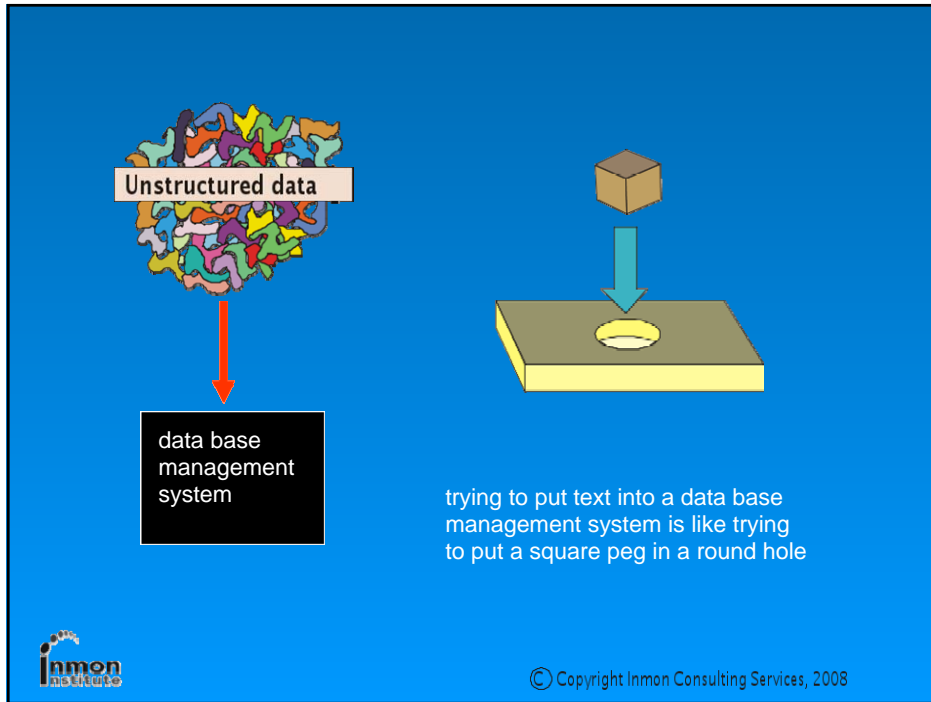

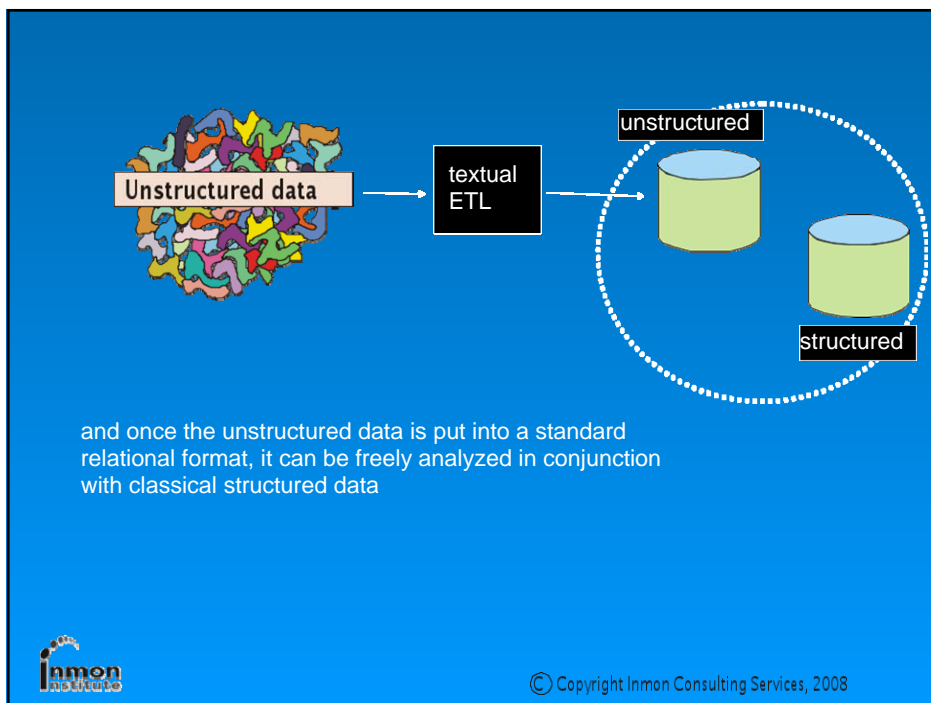

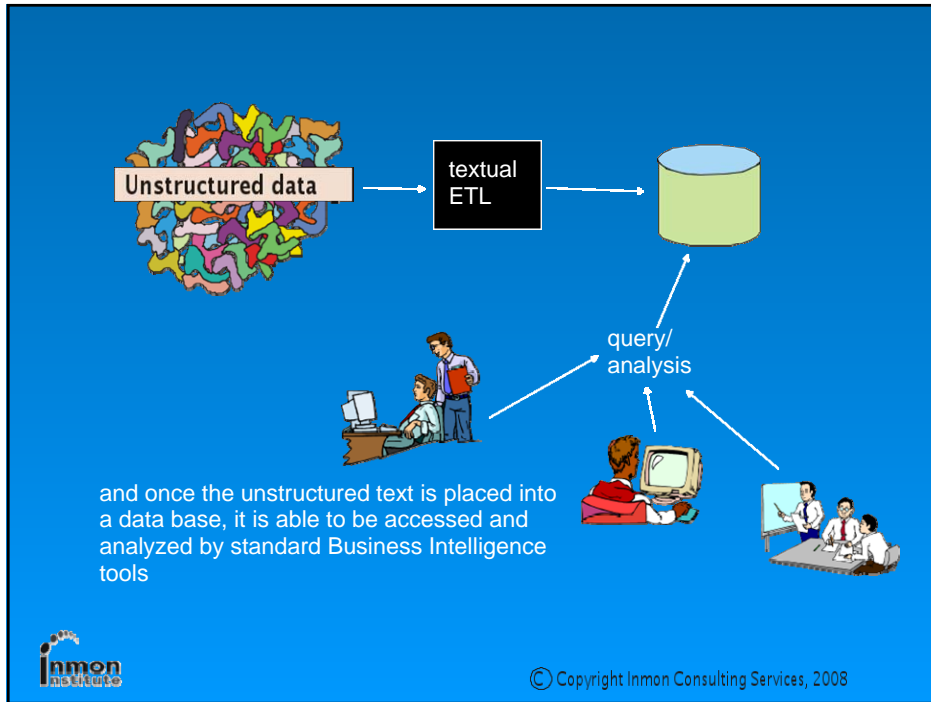

but there is another important type of data that has not been included in corporate decision making – textual unstructured data

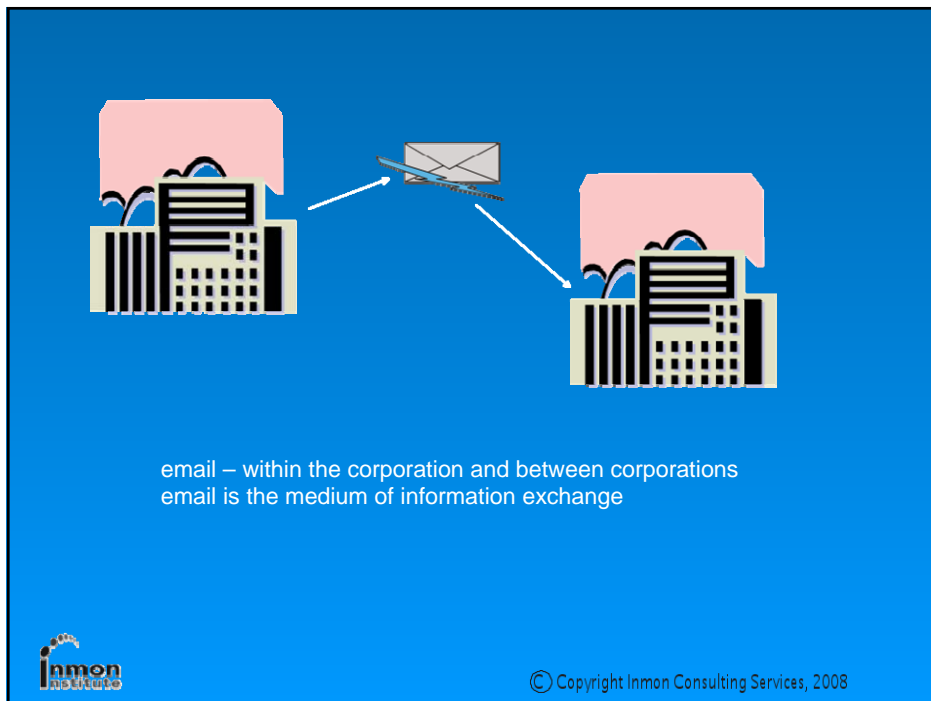

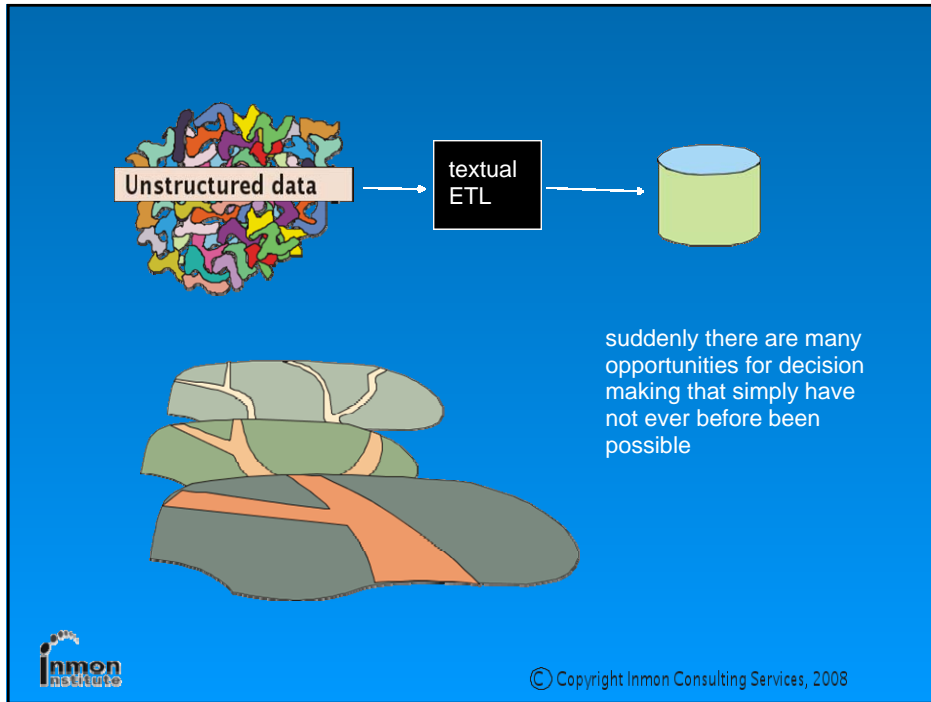

- email
- contracts
- memos
- warranties
- letters
- law suits
- management reports
- etc.

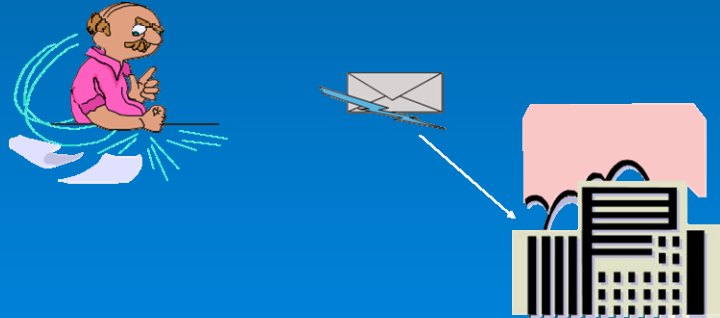

© Copyright Inmon Consulting Services, 2008

so what's the problem?

the problem is that when business incorporates email as a standard part of operations, that management has NO IDEA what is going on in the business

© Copyright Inmon Consulting Services, 2008

now management can see what is going on with the business

© Copyright Inmon Consulting Services, 2008

corporate contracts

management

of course we know what is going on with our corporate contracts!!!

what they really mean is that we can find any one contract, get a lawyer to read it, and have the lawyer explain the contract to the executive

corporate contracts

but when it comes to looking at contracts collectively, management has NO IDEA what is in the corporate contracts

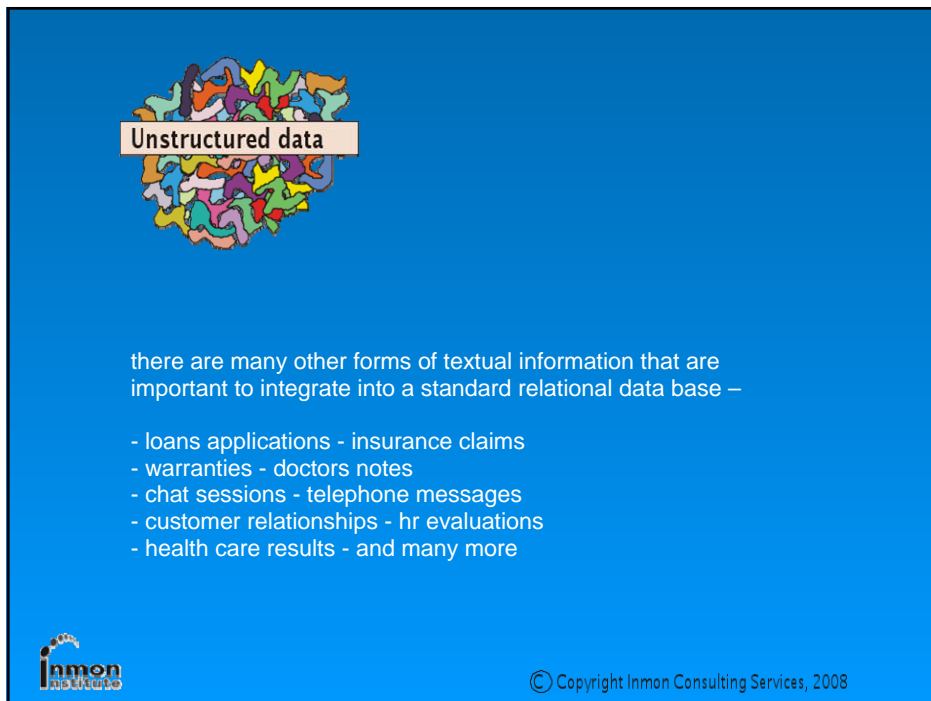

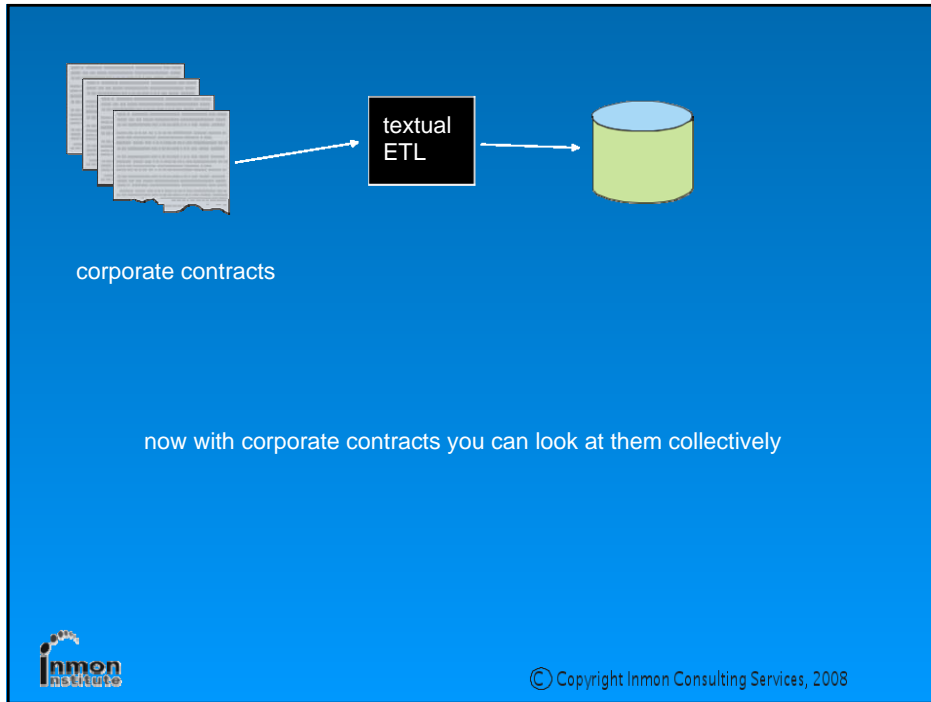

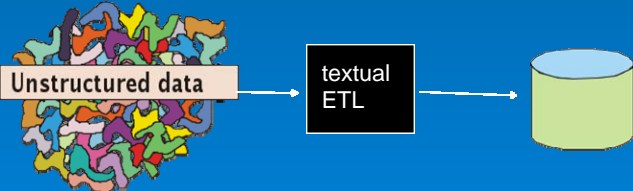

looking at contracts collectively

- how many contracts will expire in 6 months
- how many contracts contain penalty clauses
- how many contracts have a value greater than \$1,000,000
- how many contracts mention product XYZ
- and so forth

Unstructured data → textual ETL → [Database]

some of the salient features of Textual ETL –

- scalable
- multi lingual
- operates on ANY source of text
- loads data into ANY relational dbms
- addresses many difficult problems of textual processing
- terminology resolution
- date standardization
- homographic resolution
- semi structure documents
- multi index formatting
- and many more issues of textual integration
