

Visualizing Financial Information Quality Using Heat Maps and Semantic Data Quality Rating System

ABSTRACT

Government regulators and investors in the global capital markets rely heavily on reported financial data and place implicit trust in the integrity and quality of this information. This financial data enters the information supply chain as manually processed data as company quarterly and annual filings. An intense focus on outlier data is of great interest as a potential compliance issue and as arbitrage opportunity for investment, also called alpha. Unfortunately, distinguishing between poor quality and valid outlier data is difficult for computers and requires manual screening. Given the vast amount of data it's also prone to human errors. We present a case study, where we applied business rules driven information quality ratings to automatically tag semantic data quality rank to each information element. Aggregated quality rank displays outliers as hot spots on heat maps enabling greater transparency and insights.

BIOGRAPHY

Ashu Batnagar

Chief Executive Officer
Good Morning Research

Ashu Bhatnagar is CEO of Good Morning Research, a Softpark company that specializes in building Semantic XBRL technology for Wall Street banks, hedge funds and government regulators in USA, UK, and India. Mr. Bhatnagar has over ten years of experience in working at Wall Street banks as product manager, and before that for fifteen years in the computer industry as VLSI designer, software product manager and Internet entrepreneur. Mr. Bhatnagar also taught Advanced VLSI Design and Supercomputer Architectures courses at graduate level as adjunct professor at University of Massachusetts, Lowell. Mr. Bhatnagar has an undergraduate degree in Electrical Engineering from Indian Institute of Technology, Roorkee, and Masters in EE from University of Rhode Island. He also studied as a graduate student at MIT in the area of Advanced VLSI Design. Mr. Bhatnagar has presented papers at International Conferences on Data Quality, Semantic Technology and W3C/FDIC Workshop on XBRL.

Objectives:

- ❖ **Contribute to the research on Information Quality in the area of capital markets financial data**
- ❖ **Describe challenges and opportunities**
- ❖ **Describe a practice-oriented solution using semantic tagging of an algorithmically assigned Data Quality Score as linked metadata**
- ❖ **Present a case study for visualizing data quality based on semantic ratings and displayed as heat maps for fast drill-down analysis.**

Challenge 1: Data has little meaning without Context

Consider the spreadsheet (here). It takes you only a moment to work out that the item surrounded by the blue square is 16,000 in Tangible Assets for the 2002/2003 financial year. You worked that out by synthesizing all of the context that surrounds that blue square. Now think about the way a computer might digest the contents of the blue square. At best, the computer will know that the Number 16,000 appears at cell reference C8. At worst, it will just know "16,000".

XBRL allows systems to communicate the entire context that a human needs to fully understand a concept.

Source: <http://www.kpmg.com/xbrl/context.asp>

	A	B	C	D
1				
2	Balance sheet			
3	at September 30, 2003			
4		Note	2003	2002
5			€ 1,000s	€ 1,000s
6	Fixed assets			
7	Intangible assets	15	7.3	11.7
8	Tangible assets	16	16.0	15.3
9	Investments	17	3.5	6.3
10				
11				

Thousands of euros. The numbers in this column relate to the 2003 financial year.

We are looking at "tangible assets." Tangible assets are a type of fixed assets. There is more information about this number in the notes to the accounts.

Case Study: A day-in-the-life of a Hedge Fund Manager

Copyright © 2011. GoodMorningResearch.com – A Softpark Company

The 5th MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Information Quality Industry Symposium
 Cambridge, Massachusetts, USA
 July 13-15, 2011

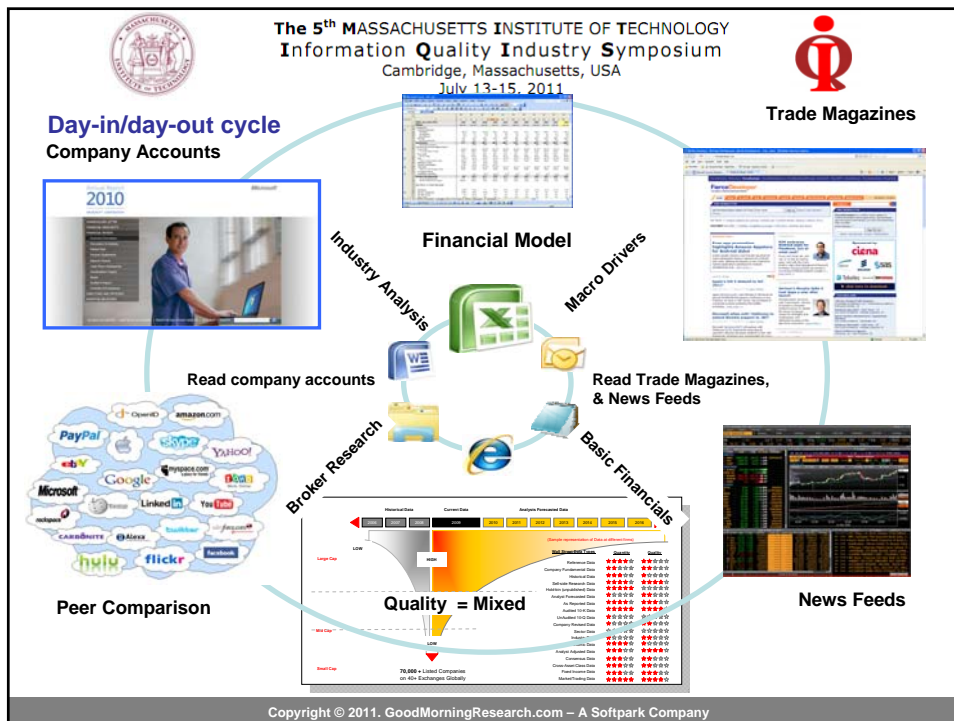

Case Study: A day-in-the-life of a Hedge Fund Manager

As part of stock Analysis, Portfolio Managers and Analysts:

- Read company accounts
- Read Trade Magazines, & News Feeds
- Read Broker Research
- Industry Analysis
- Peer Comparison
- Macro Drivers
- Triggers: (What will cause change)
- Basic Financials
- Detailed Financials (Model)

This is a day-in/day-out cycle.

Copyright © 2011. GoodMorningResearch.com – A Softpark Company

Trigger:

Guinness World Records, the global authority on record breaking, today confirm that the *Company XYZ* product is the ***Fastest-Selling Consumer Electronics Device***.

The sales figures outstrip both the iPhone and the iPad for the equivalent periods after launch.

March 2011

Start Analysis:

So the Fund Manager wants to look at a Model in more detail.

At the Model stage, the choice for a Fund Manager is to build and maintain an internal model, or reach out to a favourite Sell-side analyst(s) and obtain their latest model.

RitchViewer™ FinancePack Screen shots: Courtesy Colin Ritchie

Analysis for Alpha:

To extract 'alpha' from the model, the Portfolio Manager needs to work through many components of the accounts being presented.

In this example, we are examining the Analysts' supplied Discounted Cash Flow Analysis.

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Revenue	10000	11000	12000	13000	14000	15000	16000	17000	18000	19000	20000	21000
Operating Income (EBIT)	2000	2200	2400	2600	2800	3000	3200	3400	3600	3800	4000	4200
Free Cash Flow	1500	1600	1700	1800	1900	2000	2100	2200	2300	2400	2500	2600
Present Value of Cash Flows	10000	11000	12000	13000	14000	15000	16000	17000	18000	19000	20000	21000

A company's value can be described as the sum of all future cash flows discounted back to today's value.

$$\text{Valuation} = \text{fcfY1}/(1-\text{dr}) + \text{fcfY2}/(1-\text{dr})^2 + \dots + \text{fcfYn}/(1-\text{dr})^n$$

where:

fcf = Free Cash Flow, and dr = Discount Rate

Analysis (walk-thru-the-data):

- ✓ Model forecasts growth in revenue from 2009 to 2020.
- ✓ Revenue growth rate is falling away from double-digit in historic years to <2% by 2020.

- ✓ EBIT growing from 2010 to 2020; and as importantly as a function of Sales Revenue.
- ✓ EBIT Margin (EBIT/Revenue) looks to be fairly constant over the forecast years.
- ✓ So far the data looks reasonable

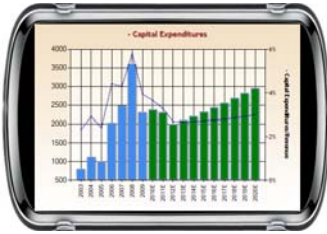

The 5th MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Information Quality Industry Symposium
 Cambridge, Massachusetts, USA
 July 13-15, 2011

Analysis (walk-thru-the-data):

- ✓ Model shows Depreciation of Assets growing (*LHS*), and
- ✓ As a function of Revenue (*RHS line-chart*)

Capex to Revenue however looks odd
 as the model shows it taking until 2016 for the Capex spend to get back to 2009 levels – even though Revenue is growing!

Copyright © 2011. GoodMorningResearch.com – A Softpark Company

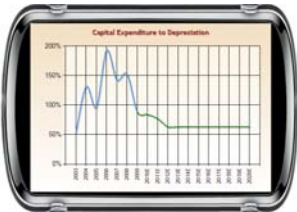

The 5th MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Information Quality Industry Symposium
 Cambridge, Massachusetts, USA
 July 13-15, 2011

Analysis (walk-thru-the-data):

- ✓ Switching charts to depict Capex as a percentage of Revenue, we see the model is forecasting a step-down in future capex – even though we know that Company XYZ is investing to keep up with the competition.

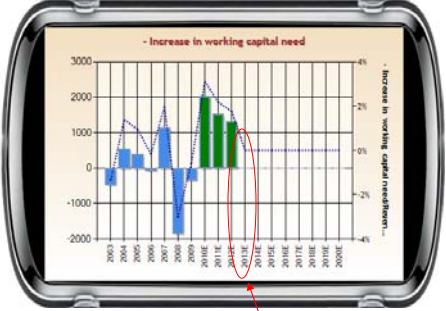

- ✓ Typically this item is a function of the rate the company is depreciating its assets (Capex/Depn) or a rate against future Revenue (Capex/Revenue)

Copyright © 2011. GoodMorningResearch.com – A Softpark Company

The 5th MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Information Quality Industry Symposium
 Cambridge, Massachusetts, USA
 July 13-15, 2011

Drill-down Analysis

Moving down to Working Capital, we see a real issue with the data.

Working Capital is a function of the Capital that is need to be set aside for the Increase in Accounts Payable, Accounts Receivable, and Inventory that goes with any increase in Revenue.

Yet the Model has this data falling to **zero** in 2013.

Copyright © 2011. GoodMorningResearch.com – A Softpark Company

The 5th MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Information Quality Industry Symposium
 Cambridge, Massachusetts, USA
 July 13-15, 2011

Quantifying the Problem and its Impact:

Earnings per Share (EPS)	Jun-11	Jun-12
Mean Estimate (μ)	2.56	2.76
Standard Deviation (σ)	0.07	0.10
Coefficient of Variation (C_v)	2.7%	3.7%

$$C_v = \frac{\sigma}{|\mu|}$$

For a company like Company XYZ, this item is probably less noticed than an Industrial widget maker. A quick calculation shows a **6% impact on valuation by having this number missing**.

Now 6% may not appear much, but Finance Theory tells us that extracting true Alpha for a stock like Company XYZ is difficult due to the breadth of analyst's coverage.

If we take a group of 28 Analysts in the Market we find that the Coefficient of Variation is only 2.7% for 2011. This means the 6% impact on valuation is around double one standard deviation from the mean of Analysts estimates.

Visualizing Financial Information Quality Using Heat Maps and Semantic Data Quality Rating System

✓ Rather than walking through the Analysts model, a slow and tedious process, we upload the Excel model to *ResearchPoint™* and examine the quality of the Balance Sheet via semantic rated **Data Quality Heat Map.**

Key finding: Quickly we find that the Balance Sheet is only forecast to 2013, where as the Discounted Cash Flow relies on Data to 2020.

Copyright © 2011. GoodMorningResearch.com – A Softpark Company

The 5th MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Information Quality Industry Symposium
 Cambridge, Massachusetts, USA
 July 13-15, 2011

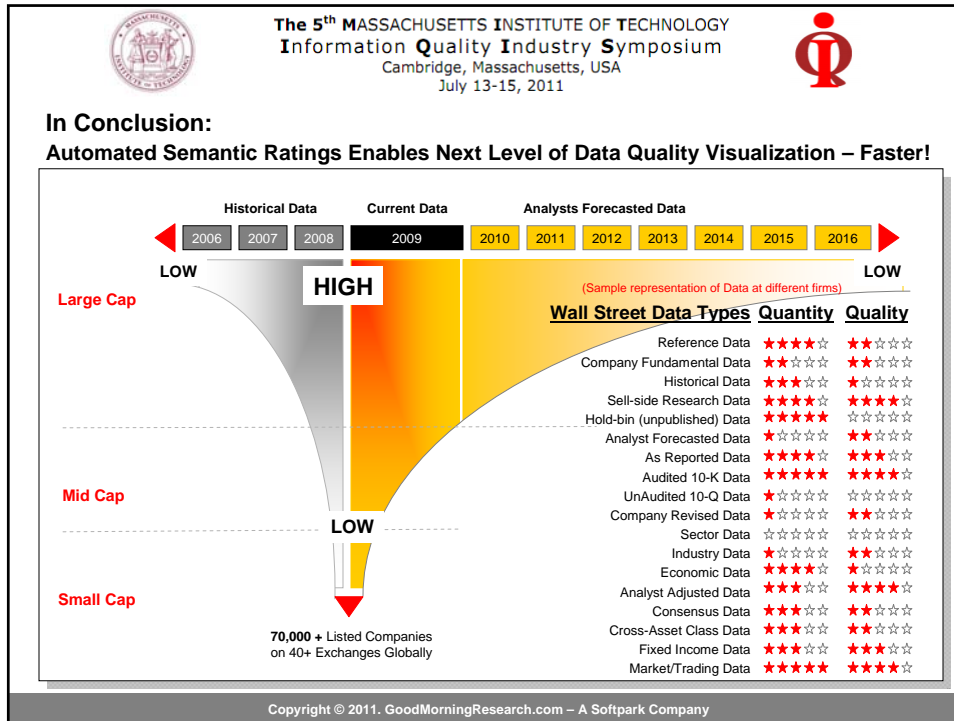

Case Study Conclusion:
A day-in-the-life of a Hedge Fund Manager

Given this knowledge, the Fund Manager is left with several choices –

- a) Source a new model, or
- b) rework the Working Capital component of the Discounted Cash Flow extrapolating from Sales using Debtor Days, Creditor Days, and Days Inventory.

In the case, the Fund Manager chose the later and discovered the 6% impact on valuation due to missing data.
